

getIntPropProcessData

setIntPropSetPointPressure

getPressureZoneProcessData
Address

```
graph LR; A[getIntPropProcessData] --> C[getPressureZoneProcessData Address]; B[setIntPropSetPointPressure] --> C;
```

The diagram illustrates a data structure or memory layout. On the left, two separate boxes represent functions: 'getIntPropProcessData' (top) and 'setIntPropSetPointPressure' (bottom). Both of these functions have blue arrows pointing towards a single, larger box on the right. This box is shaded gray and contains the text 'getPressureZoneProcessData' followed by 'Address' on a new line. This suggests that both functions interact with or access the same memory address or data structure.
